Footnotes:

- ¹ Stumpage value is what the landowner receives for the sale of their standing timber. Delivered value is what is paid by the forest products industry upon delivery of the trees to the mill.
- ² Forest economic impact is based on total effects of all forest products and wood-based industry sectors
- ³ Timberlands are a subset of forestlands that are not reserved by law and potentially available for commercial timber harvest. Federal, state and local governments own public timberlands. Non-industrial private landowners (i.e., farm forests, family forests), forest industry, or other corporate businesses (i.e., timber investment management organizations) own private timberlands.
- ⁴ Reserved forests, as used here, are for public lands where law does not permit commercial timber production.
- ⁵ Harvests include removals during timber harvests and removals for other reasons such as land conversion.
